

Practice Test Answer and Alignment Document
Mathematics: Grade 4
Pencil-and-Paper

The following pages include the answer keys for all machine-scored items. A sample student response for the top score is included for all hand-scored constructed response items.

- Some answer keys include one possible sample student response. Other valid methods for solving the problem can earn full credit unless a specific method is required by the item.
- In items where the scores are awarded for full and partial credit, the definition of partial credit will be confirmed during range-finding (reviewing sets of real student work).
- If students make a computation error, they can still earn points for reasoning or modeling.

3.	<p><u>Sample Top Score Response</u></p> <p>The student divided correctly, but 0.20 hour is not the same as 20 minutes.</p> <p>0.20 hour is $\frac{2}{10}$ of an hour and 20 minutes is $\frac{1}{3}$ of an hour.</p> <p>Before dividing by 10, the student could have changed 2 hours to 120 minutes.</p> <p>120 minutes \div 10 = 12 minutes.</p> <p>So it takes 12 minutes for the train to go around the museum 1 time.</p> <p>Refer to the Holistic Rubric for 3-Point Reasoning Constructed Response Items for score point information.</p>	4.R.2 4.NF.C.6 4.MD.A.2

5.	<p><u>Sample Top Score Response</u></p> <p>The perimeter of the floor is $18 + 14 + 18 + 14 = 64$ feet.</p> <p>The width of the two doors needs to be subtracted. There are 2 doors with a width of 3 feet. The total width is $2 \times 3 = 6$ feet. So the length of baseboards, in feet, that are needed is $64 - 6 = 58$.</p> <p>The length of each baseboard is 8 feet. $58 \div 8 = 7\frac{1}{4}$ feet, so the contractor needs to buy 8 baseboards.</p> <p>The total cost, in dollars, is $8 \times 11 = 88$.</p> <p>Refer to the Holistic Rubric for 3-Point Modeling Constructed Response Items for score point information.</p>	<p>4.M.1 4.OA.A.3-2 4.MD.A.3 4.M.1-4</p>
